Data Engineer

PROFESSIONAL SUMMARY

- 6+ years of overall working experience of software development
- Solid experience working with such programming languages like Python, SQL, C++, C#, R, JavaScript, Java, Kotlin, Go, Pascal, Falcon
- Good knowledge working with such databases as PostgreSQL, SQLite, Redis
- Hands-on experience as a leader in taking care of all the data pipelines and decisions making about technology course inside a company
- Understanding of GUI development
- Practical skills in backend development
- Passionate about CS, data, technologies and cyber security
- Algorithms expert and data structures adept
- Mathematician who likes to answer complex questions using statistics and data

LANGUAGES

- English – Professional working proficiency
- Ukrainian – Native

EDUCATION

Lviv Polytechnic National University
Master's degree in Applied Mathematics

TECHNICAL SKILLS

Programming Languages
Python, SQL, C++, C#, R, JavaScript, Java, Kotlin, Go, Pascal, Falcon

Frameworks
Django, Boost, Kivy, Flask, REST Framework

Programming libraries
DLL

Databases
PostgreSQL, SQLite, Redis

Cloud Technologies
AWS

Operating Systems
Linux

Command Tools
Curl

Other Tools
Software Design, Problem Solving, STL

PROJECT EXPERIENCE

Customer: Flatiron Health

Date: Feb 2024 – Present

Customer description: Clinicians, researchers and regulators rely on Flatiron technology and evidence to learn faster and power smarter care for every patient. Because transforming cancer care takes all of us.

Project description: The team is responsible for developing an electronic health record software used in oncology practices. This software tracks and manages all patient data related to their cancer treatments and medical history. It includes information such as lab results, patient details (address, phone number, allergies), treatment plans, and upcoming appointments.

Role: Lead Data Engineer

Customer: JetSoftPro

Date: Jul 2020 – May 2022

Customer description: JetSoftPro is a leading software development and outsourcing firm with a business-centric approach to delivering high-quality, innovative solutions to businesses worldwide. The team of expert developers is committed to staying up-to-date with the latest technologies and industry trends, ensuring that we deliver cutting-edge solutions that meet our clients' evolving needs.

Project description: Idea behind the product was to create ultimate source of information about all the US private companies on the similar scale as it's available for the public ones. In order to achieve that we combined power of free, proprietary and government datasets using one of the best US economics minds and cooked it with modern data tools and development practices.

Role: Lead Data Engineer

Responsibilities and Key Accomplishments:

- Led data and software engineering: took care of all the data pipelines, scraping, ETL stuff and web app development; mentored API development; made decisions about technology course inside a company;
- Provided/evaluated technical background/perspective at meetings with customer/partner companies.

Technologies: Analytical Skills, Software Design, Problem Solving, Databases, R, Amazon Web Services (AWS), APIs, Python, Algorithms, SQL, Linux, Django, PostgreSQL/

Customer: Cerera Technologies

Date: Jun 2018 – Jan 2020

Customer description: Cerera Technologies is the international provider of self-service and business automation solutions. They create go-ahead hardware and software for Retail, Logistic, and Manufacturing to grow their productivity and profit.

Project description: The sense of the project was to support Software development for self-checkout terminals and smart lockers

Role: Software Engineer

Responsibilities and Key Accomplishments:

- Managed client/server API development;
- Maintained GUI development;

- Performed low-level device communication (scanner, printer, lamp etc);
- Adapted new protocol for scales interaction;
- Implemented middleware for locks interaction;
- Conducted integrations with clients' systems.

Technologies: Software Design, Falcon, DLL, STL, Boost, Curl, Python, C++, Algorithms, Kivy, SQLite, Flask.

Customer: ReligionPeace

Date: Mar 2016 – Apr 2018

Product description: ReligionPeace is a social information network, the first and only interreligious and peaceful communication platform.

Role: Back-end Developer

Responsibilities and Key Accomplishments:

- Maintained backend development;
- Performed RESTful APIs creation;
- Conducted Database management and migrations;
- Took active part in code deployment;
- Leveraged APIs for automated translation.

Technologies: Software Design, APIs, Ansible, RESTful WebServices, Unit Testing, Python, Algorithms, Linux, Django, PostgreSQL, Django, REST Framework, Redis.
